The Order Summary serves as a pre-invoice, allowing users to review, examine, and place orders while providing a comprehensive breakdown of all charges at both the origin and destination.

It incorporates an online exchange rate for currency conversion and generates a detailed order summary that is converted into a proforma email distributed to all relevant parties involved in the transaction

#### Pick up requirement

When driver in close proximity to shipper location, the system immediately send pick up notification email containing vehicle and driver identification to shipper

During the pick-up task, the driver is required to capture invoices, packing lists, and pictures of the items, which are then submitted to the Mahyu cloud server. Subsequently, this information is published in the "view online notification" menu for tracking and reference purposes.

Driver then proceeds to deliver items to Airport warehouse

The forwarder operation team proceeds with customs handling at the airport by following these steps:

1.Inputting the accurate weight based on the scale measurement at the warehouse or airport. This weight data is crucial for Mahyu to generate the final invoice for the transaction.

2. Uploading all necessary documents to the system, including customsrelated paperwork. These documents are then transmitted to the forwarder at the destination via email and download accessible through the customs clearance menu, status shipment is indicated "on flight"

Once customs clearance is finalized, the system automatically retrieves all relevant shipment details and fetches them to a driver stationed at the destination. The driver is then responsible for picking up the cleared shipment and transporting it to its designated final destination. Essentially, the sequences of the mobile application **mirror** those of the transporter mobile application at the origin. The driver follows the same routine, picking up and delivering items to the final consignee address.
