

The Transformation

Transitioning logistics services from “current traditional method, sequential workflows, offline communication-interactions, and paper-based administration” to technology-driven processes, which provide concurrent work flows, real-time processes and digital format information administration, can’t be done overnight.

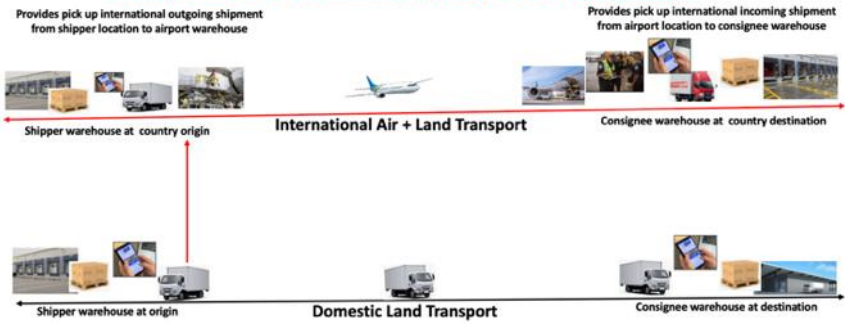

Achieving this significant overhaul transition requires a team with a mindset of in-depth skills in the work flow problem-solving dynamics of logistics and supply chain operations, as well as the technical creative structure system design expertise.

Technology is assuming major roles in today’s environment

Domestic Land and International Air Transport Integrated Methods,

Overview - The potential of every industry is driven by Platform business model cannot be ignored. Modern society demands online solutions rather than waiting for traditional responses to fulfill their daily requirements. *Imagine* a world where all “domestic and international transport needs, warehouse services, and eCommerce logistics” are connected with *financial aspects, logistics functions and administration process* in real-time. The supply chain network is now fully-integrated in Mahyu, offering enhanced transparency and greater efficiency.

Digital Logistics Platform

The Evolution

The rapid evolution of the digital business environment is driving the sustained growth of eBusiness and eCommerce border and cross-border transactions. Nowadays, digital customers demand consistent transparency in transactions, cost effective and reliable logistics services.

For companies and their partners to succeed in such a challenging environment, they must expand sales and marketing efforts, reduce costs and evolve operational functions and back-office administration to become autonomous.

Domestic and International Air Transport Integration

Our domestic transport **pairs** each vehicle with a driver, providing picking up and delivery services, with return trip option. These pairing is linked into sales and scheduling system. The integrated information is then published for shipper to view and select.

Mahyu solution is tailor in providing integration with solutions that allow shipper users to seamlessly select *preferred forwarder or transporter*, as well as streamline the payment process for customs duties, taxes and last mile delivery in their respective countries.

API

Mahyu has developed its own API features, enhancing information flow and enabling our partners' systems to improve collaboration and communication. This allows for seamless automation of identical tasks with Mahyu, thereby increasing efficiency.

Mahyu presents a comprehensive solution that serves as a single source of collaboration and cooperation, driven by real-time integration and interactions among users. Working within the platform enable each user to minimize delay, enhancing efficiency and optimizing resources, ultimately improving the bottom lines. For more information: info@mahyu.com

eCommerce Logistics

Mahyu has integrated a unique HS code feature into its system. By including the Harmonized System (HS) code along with the applicable duty and tax rates for each country, Mahyu enables transporters and shippers to search product categories and accurately declare detailed products in compliance with customs regulations.

Warehouse Services

Warehouses hold a significant position within the supply chain, yet they're frequently underestimated by shippers and their partners. Regardless of whether it's a domestic, international, or eCommerce transaction, the supply chain consistently **begins** from the origin warehouse, progresses to the chosen mode of transportation, and **ending** at the destination warehouse.

Integrated Payment System

The system displays a summary of the breakdown charges once the shipper has selected a transporter. For business users, it automatically deducts the amount from their credit line balance. For individual users, it immediately presents online payment options for selection.

The users to *choose between QR code mobile banking or credit card payments*, each with different nominal surcharge fee calculations. The system displays the final invoice charges, including applicable surcharges, for the shipper to acknowledge and make the payment.

Mobile Application

On the *scheduled shipment date*, Mahyu promptly distributes all relevant information, including item descriptions, documents to be picked up, and locations, to the driver as soon as they log into our mobile application. Driver reviews each list of assignment and click to start the initial processed.

Our mobile app functions serve as a practical tool for drivers, offering a checklist of required documents for each stage of pickup or delivery. This includes invoices, packing lists, certificates of origin, and other necessary documents as instructed by the system.
