The Order Summary serves as a pre-invoice, allowing users to review, examine, and place orders while providing a comprehensive breakdown of all charges at both the origin and destination.

It incorporates an online exchange rate for currency conversion and generates a detailed order summary that is converted into a proforma email distributed to all relevant parties involved in the transaction

Transporter at origin to respond new order

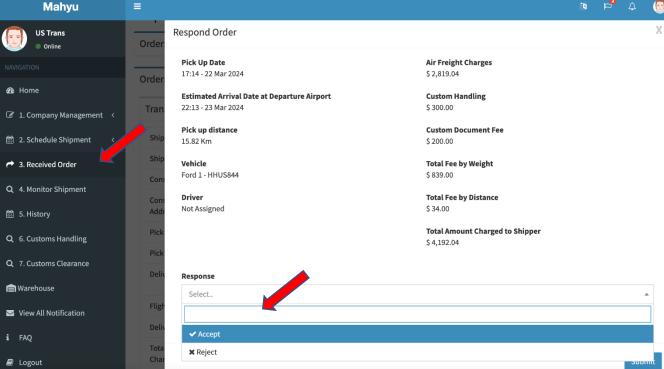

How Mahyu notifies forwarder of new shipment:

- Online notification of new order
- Email notification of new order, proforma invoice and work order

Once forwarder/transporter at origin had accepted shipment, the system will automatically issue work order and proforma invoice to all parties involved.

Transporter at origin with mobile application

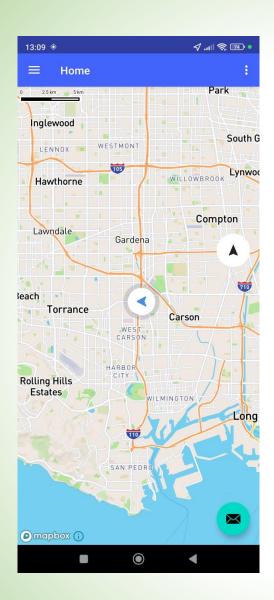

The driver logs in using their assigned mobile number and password provided by the company's PIC.

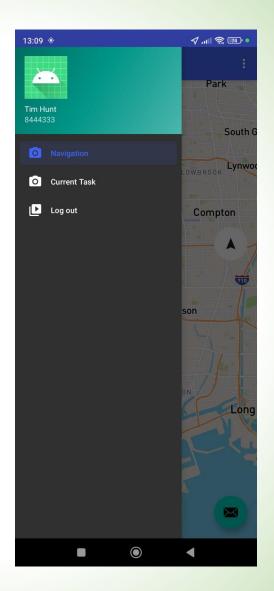

They then click on the "current task" option to display pickup information.

Additionally, they can click on the list of items to view the items and documents scheduled for pickup

Note:

Current task can accomodate up to 8-eight current tasks

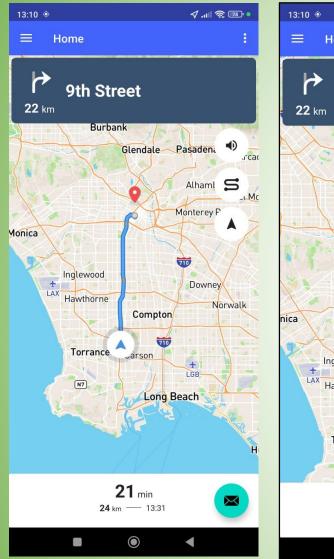

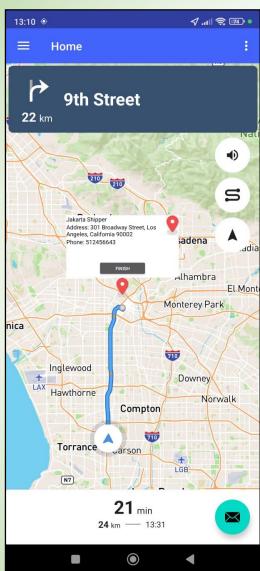

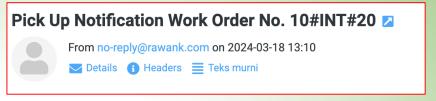

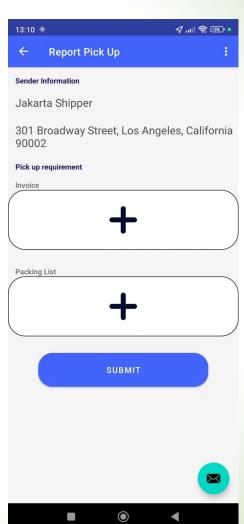

Privacy Policy

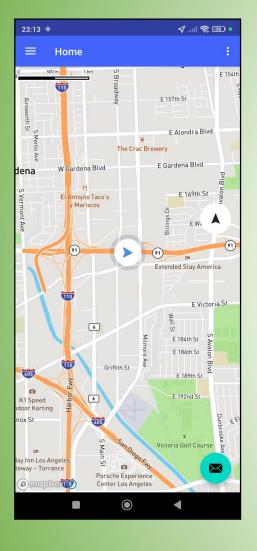

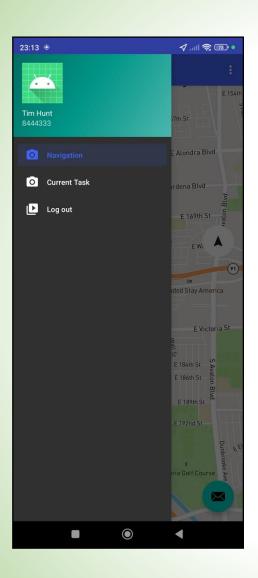

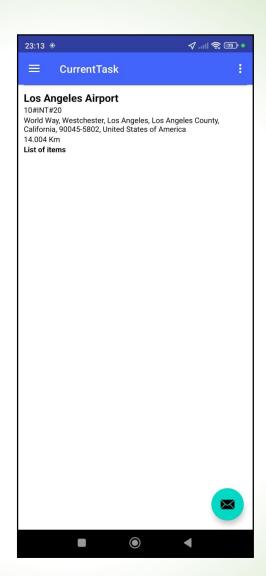

When driver in close proximity to shipper location, the system immediately send pick up notification email containing vehicle and driver identification to shipper

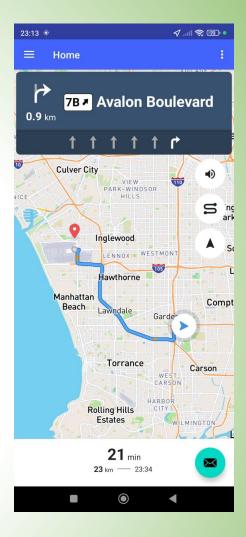

During the pick-up task, the driver is required to capture invoices, packing lists, and pictures of the items, which are then submitted to the Mahyu cloud server. Subsequently, this information is published in the "view online notification" menu for tracking and reference purposes.

Privacy Policy

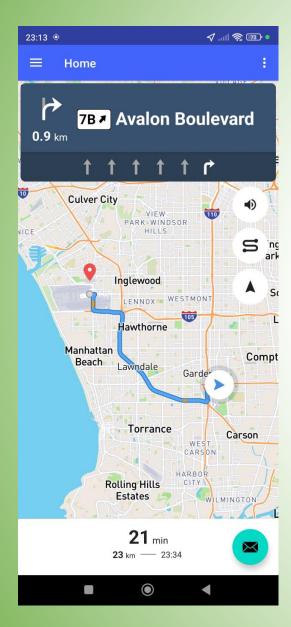

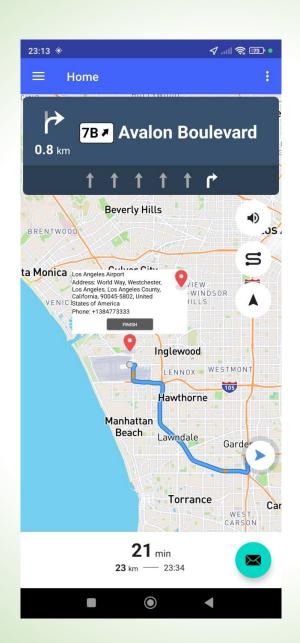

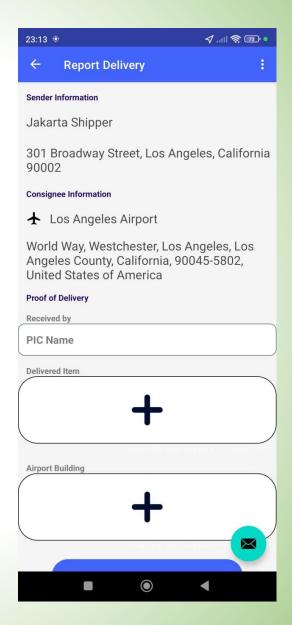

Driver then proceeds to deliver items to Airport warehouse

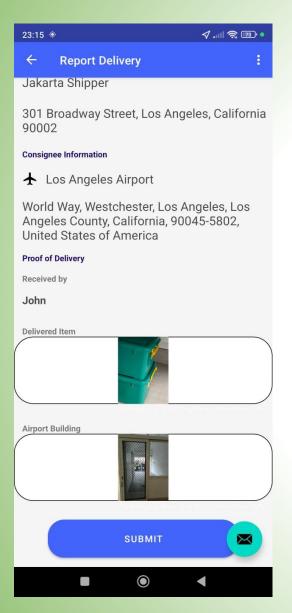

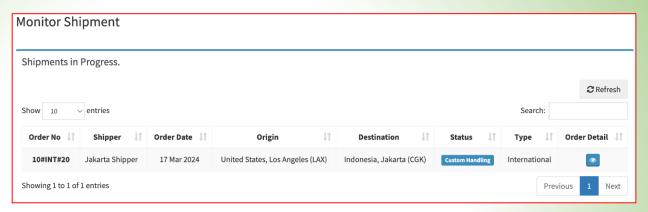

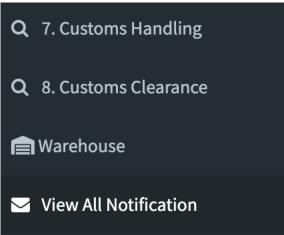

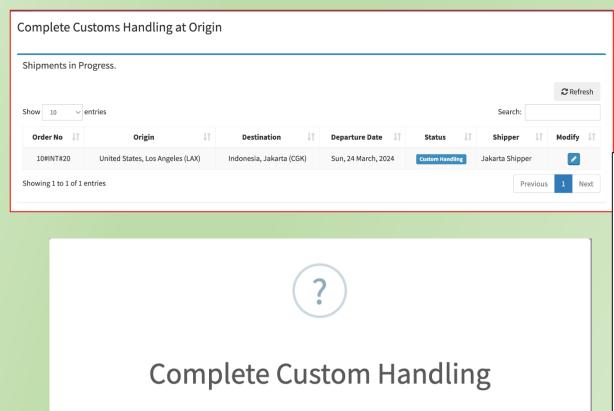

Work in progress receipts are placed at" View all Notification" for shipper and transporter to verify.

Transporter at origin performs customs handling

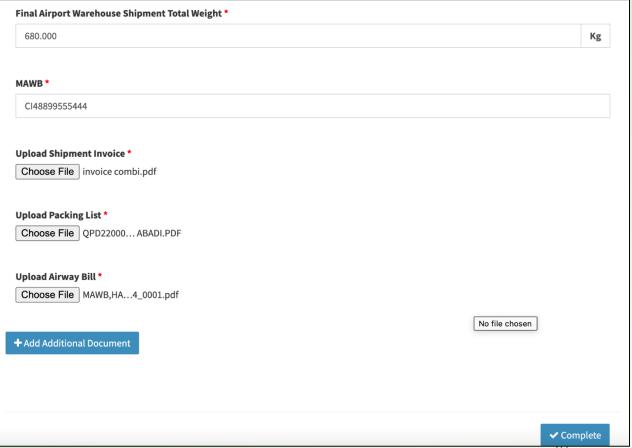

Complete custom handling for order no 10#INT#20?

Complete

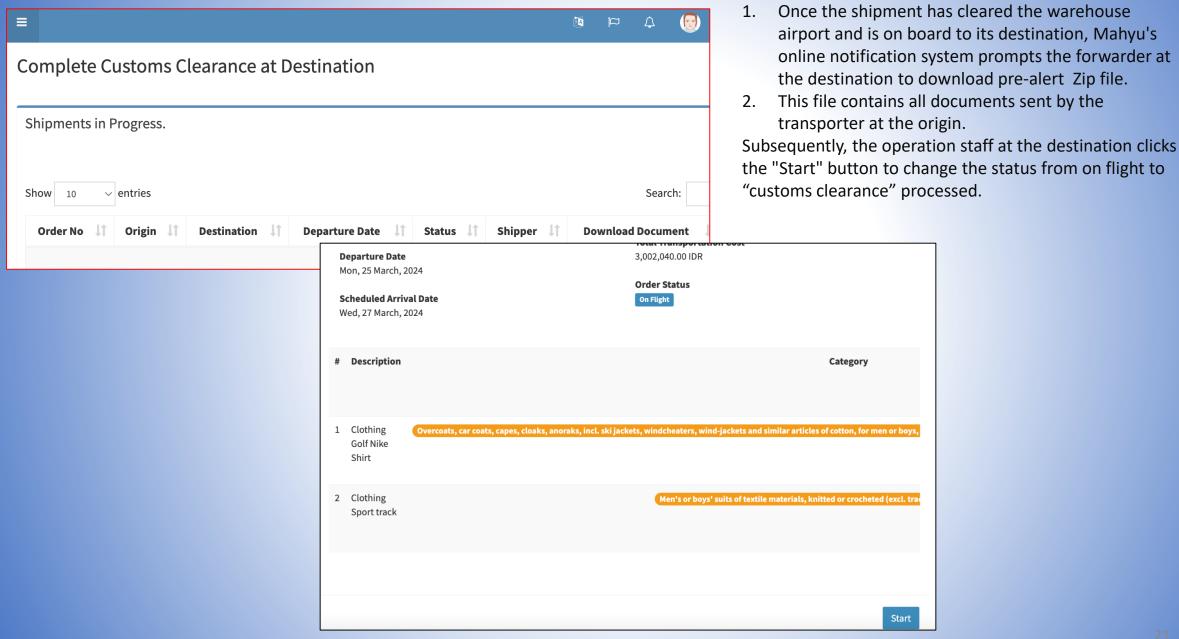

The forwarder operation team proceeds with customs handling at the airport by following these steps:

- 1.Inputting the accurate weight based on the scale measurement at the warehouse or airport. This weight data is crucial for Mahyu to generate the final invoice for the transaction.
- 2.Uploading all necessary documents to the system, including customs-related paperwork. These documents are then transmitted to the forwarder at the destination via email and download accessible through the customs clearance menu, status shipment is indicated "on flight"

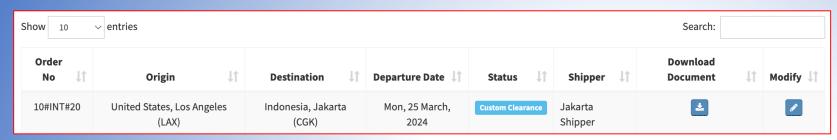

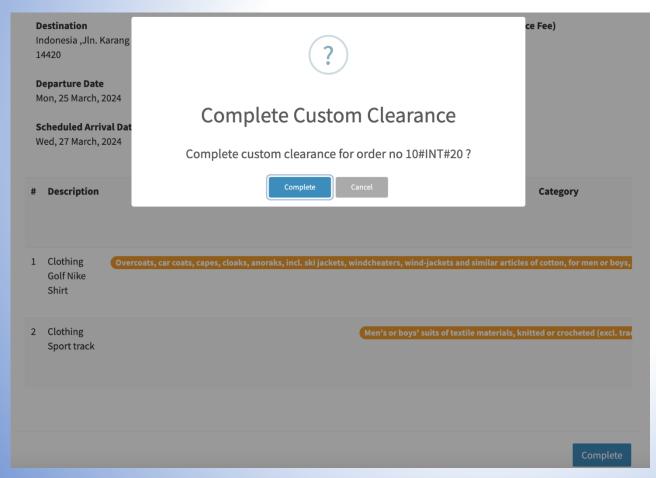

Transporter at destination performs customs clearance task

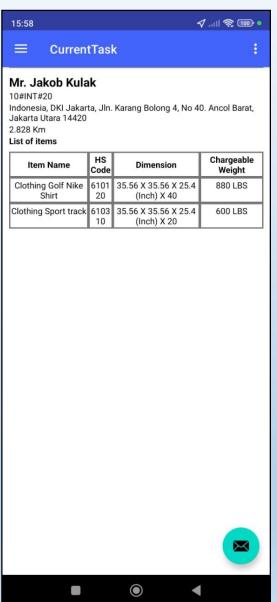

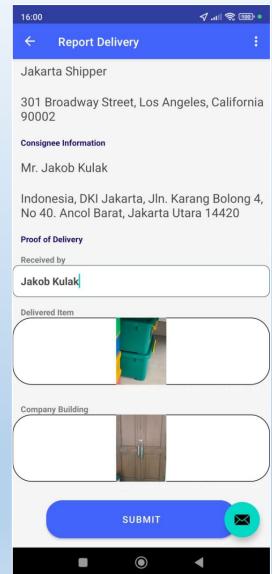

Once customs clearance is finalized, the system automatically retrieves all relevant shipment details and fetches them to a driver stationed at the destination. The driver is then responsible for picking up the cleared shipment and transporting it to its designated final destination.

Essentially, the sequences of the mobile application **mirror** those of the transporter mobile application at the origin. The driver follows the same routine, picking up and delivering items to the final consignee address.

All parties involved can now access the pick-up and delivery work receipts through the Notification menu.

Thank You!

Mahyu LLC is a pioneering digital logistics developer firm dedicated to collaborating with logistics companies, businesses, and consumer shippers to drive transformation in the supply chain sector. Our company has developed a cutting-edge logistics platform designed to serve the logistics industry across various countries.
